

Special builds

Specials/Engineering

Thompson Valves (IVP) offers a full bespoke design service from conception to completion.

With our highly experienced team we can take your initial concept idea, work in partnership with yourselves to size and specify a standard product, or a stand alone bespoke special to meet your exact requirements.

Once a specification is reached, whether it be a standard product or bespoke special, we shall provide a 3D model and 2D drawings for discussion purposes and final approval. Once approved a quotation for the final product and an applicable spares kit shall be presented.

All of our standard and special products come with a full 12 month warranty.
